Subject: RWP2176 correction on freight charges

The freight cost charging to the customer for RWP2176 will need to be updated to \$680.11.

We originally quoted \$387.44 to the customer, see attached. When we went to ship, I was told it would be over \$1,100.00 so you can imagine the shock of the pricing difference. I was told we could get the cost down to \$972.77 if we cut the pallet down to the size of the shades so I said okay and told the customer we would split the pricing difference from \$972.77 and \$387.44.

The difference between \$972.77 and \$387.44 is \$585.33. Half of \$585.33 is \$292.67. So the total amount to charge for shipping should be \$292.67 + \$387.44 for a total of **\$680.11**. We will eat the balance and hopefully this will be a learning experience for freight quotes.

Thanks,

David Storm | Business Development Manager
